

A lifetime of specialist care

## Your nuclear medicine MAG3 indirect cystogram scan – appointment information

### Points to remember

- Drink one litre of fluid on the morning of your scan. There is no need to have a full bladder.
- Take your normal medication, but please tell the technologist/radiographer before the scan if you are taking diuretics (water tablets) such as furosemide.
- Please telephone us on 01895 828 880 as soon as you receive this letter if you need to cancel or change the appointment date of your scan.

### What is nuclear medicine?

Nuclear medicine is a special way of taking images of your body. Before we can take these images, we need to give you an injection containing a radioactive tracer. This is a substance with a small amount of radioactivity that highlights the part of the body we need to see in more detail.

### About your MAG3 indirect cystogram scan

This two-part scan helps to diagnose the cause of kidney damage and recurrent urinary tract infections. First, we will give you an injection containing a small amount of radioactive material. We will ask you to lie still on a scanning bed while the camera takes images of your kidneys. This takes about 30 minutes and it is important that you keep still during this time.

For the second part of the scan, you will be asked to sit on a commode (a portable toilet) positioned behind a screen and empty your bladder while images are taken.

### How long will the appointment take?

You will be with us for about one hour to complete the test.

### Is there any risk from the radiation?

The amount of radiation used is small and kept to a minimum. We believe that the benefits of having the test far outweigh any risks. To avoid exposing children unnecessarily to radiation, please do not bring them with you to the department. Please ask if you have any questions.

**Female patients**

You should not have this scan if you are pregnant, think you may be pregnant, or are breastfeeding.

**Diabetics**

You do not need to change your diet or treatment. Please bring your insulin and any snacks as needed.

**Are there any side effects?**

The substance we give you does not have any side effects. It will not make you sleepy or stop you from driving a car.

**After your scan**

You can eat and drink as usual and continue with your normal daily activities after your scan. Please try to avoid long periods of close contact with children for the next 24 hours. This is to avoid exposing them to unnecessary radiation.

**Results**

We will send the results of your scan to the hospital consultant who asked for the test.

**Additional information**

Please note that our nuclear medicine department scans many people every day. We try to keep to your appointment time as closely as possible but should you be late, or if there is an emergency at the hospital, it may not be possible to perform your scan immediately.

**Hospital transport**

If you need hospital transport to get to us, please ask your GP to arrange this.

**Private patients**

If you are a private patient please bring your private insurance details to your appointment, otherwise, please pay your invoice on the day of your scan.

**How to find us**

The nuclear medicine department is in the ANZAC Centre, ground floor, Harefield Hospital.

**Useful contacts**

If you have any questions about your scan, please call us on 01895 828 880, Monday to Friday, 8.30am to 4.30pm.
