Harefield Hospital Your Nuclear Medicine MUGA Heart Scan

Appointment information

Name:

Date:

Time:

Points to remember

- **Please telephone us on 01895 826 514 within seven days of receiving this letter to confirm that you can attend your appointment. Unfortunately, if we do not hear from you, your appointment may be given to someone else.**
- **If you are having other tests on the same day please try and arrange for them to be done before your appointment with us.**

What is Nuclear Medicine?

Nuclear Medicine is a way of taking special images of your body. We use a special camera that detects gamma rays given out by a 'tracer' that is injected into your body. The tracer contains a small amount of radioactive material which means that your body shows up in the images we take. You may hear the procedure called 'imaging'.

About your MUGA Scan

This scan looks at how well your heart is beating. We will give you two injections - the second will be given to you about 30 minutes after the first.

The first injection prepares your red blood cells for the second injection, which will contain a small amount of radioactive material. This will show up the blood in your heart in the images we take.

We will then use our special camera to take images of your heart for about 15 minutes.

How long will the test take?

You will be with us for about one hour

Is there any risk from the radiation?

The amount of radiation used in a MUGA Scan is kept to a minimum. We strongly believe that the benefits of the scan far outweigh any possible risk to your health. However, please do not bring children with you to the department; this is to avoid exposing them to unnecessary radiation. If you have any concerns that you would like to discuss, please contact us.

Female patients

You should not have a MUGA Scan if you are pregnant or think you might be pregnant.

Please tell us before you have your scan if you think you might be pregnant, if you are breast-feeding or if you have very young children.

Diabetics

If you are diabetic please continue with your normal routine. If you will need food whilst you are with us please bring a snack with you. If you are on insulin please bring this as well.

Are there any side effects?

The substance we inject will not make you sleepy nor will it stop you from driving a car.

After your scan

Following your scan you can eat and drink normally. You may go anywhere you like but please try to avoid long periods of close contact with children for the rest of the day. This is to avoid exposing them to unnecessary radiation.

Results

We will send the results of your scan to the hospital consultant who asked for the test.

Additional information

Please note that our Nuclear Medicine department scans many people every day. We try to keep to your appointment time as closely as possible but should you be late, or if there is an emergency at the hospital, it may not be possible to perform your scan immediately.

Ambulance

If you need an ambulance to bring you to us please ask your family doctor to arrange this.

Private patients

If you are a private patient please bring your private insurance details to your appointment, otherwise, please pay your invoice on the day of your scan.
